

1. Create a application folder(with app-id as name) inside google_projects/google_appengine.
2. Put all contents of the app inside the folder (app.yaml with registered app-id and a main.py).
3. cd google_appengine.
4. python appcfg.py update <folder name>
5. It will ask for email ID and password.
6. It will show deployment successful.
7. Check out your app at "<http://app-id.appspot.com>"
